ORIMA® SOLAR MODULE MOUNTING SYSTEM

NEW

Modular mounting system for solar panels

The Orima mounting system is based on modules, proven roof mounts and a profile frame.

It has been designed to withstand Nordic weather conditions. The durable mounting system is adaptable to all standard roof types.

The mounts are permanently installed onto the roof, either on the ribs, sheathing, the seams between sheets or the sheets themselves, depending on the roofing.

Installing the mounting system is quick, and it provides proven and safe solar racking on different roofing types.

If necessary, it is easy to design and install Orima® roof walkways, snow guards and ladders on the same roof.

Solar mounting systems are available in colours that blend into the colour of your roof.

ADVANTAGES OF THE ORIMA® MOUNTING SYSTEM

The Orima mounting system is based on proven brackets that are used in roof walkways and ladders.

- **MECHANICALLY FAST, WATER-RESISTANT AND PROVEN MOUNTING ON THE ROOF**
- **EXCELLENT RESISTANCE TO CORROSION THANKS TO THE NEW Magnelis® COATING:**

Exceeds the durability of zinc-coated steel by three times.

The only metal coating granted with the highest C5 corrosion protection classification.

- **QUICK INSTALLATION**
- **SUITABLE FOR ALL STANDARD ROOFING TYPES**

The mounts are delivered with the installation instructions, screws and seals.

Orima also delivers bespoke solar module mounting systems directly to the installation site.

The system is suitable for most solar panels.

Orima products are known for their superior quality and quick installation.

**ALL OF OUR PRODUCTS ARE
MADE IN FINLAND.**

ORIMA®

FOR PITCHED ROOFS

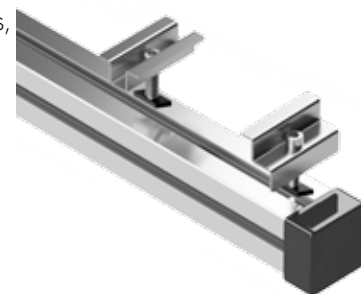

The mounts are installed onto the seams between sheets.

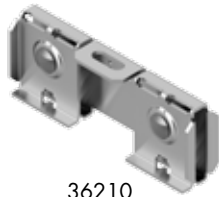

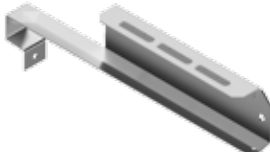

Thanks to the profile frame, the mounting system can be used for different panel sizes, which makes it suitable for many kinds of solar module systems.

The mounts are made from corrosive-resistant **Magnelis®-coated steel**. The mounting kits are also available in colours that match your roofing.

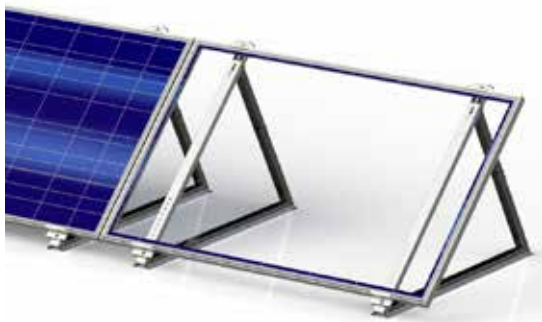

Quick and easy to order

Choose the correct mounting type for your roofing. Give us the dimensions, number and arrangement of your solar panels, along with your roofing material, and we will provide you with an offer!

FOR FLAT ROOFS

Mounting system for flat roofs

Mounting system with profile frame for flat roofs

Solar panels are installed on an angle also on flat roofs to achieve maximum capacity.

The **adjustable bracket** is installed at the correct angle (20°–45°) on site.

The mounts are made from corrosive-resistant **Magnelis®-coated steel**.

The flat roof brackets can be equipped with a profile frame, depending on the roof and solar module features.

Ask for an offer on a mounting kit for your flat roof!
